Foxconn 'Tech Talk' Series Continues on UWM Campus in Conjunction with Higher Education Recruitment Fair

Before an audience of students, faculty, academic leadership and business partners, Foxconn Industrial Internet CEO Discusses Applications of 5G Networks and High-Performance Computing

Milwaukee, WI – Foxconn Technology Group's "Foxconn Tech Talk" series continued at UWM's School of Engineering and Applied Sciences during the second annual "Foxconn Day" college recruiting fair. Led by Brand Cheng, Foxconn Industrial Internet CEO, Foxconn officials talked about the business application of 5G networks, high-performance computing and more.

Foxconn is currently hiring for available positions in career fields such as industrial artificial intelligence, big data, cloud computing, high-performance computing, smart display and smart manufacturing. With Foxconn's nearly 1,000,000 square-foot advanced manufacturing facility under vertical construction, "Foxconn Tech Talks" are a means for people to understand how business partners and job-seekers from across Wisconsin can get involved with technological developments that improve the lives of others.

By using high-performance computing and 5G networks, business partners representing clinics and hospitals will be able to empower their providers with resources that ultimately improves or saves the lives of patients. High-performance computing, for example, can be a tool to collect life-saving medical research or can more accurately and more quickly translate data from a mammogram image.

Students, recent college grads, young professionals and job-seekers interested in the above fields are invited to learn more about these type of real-life technological applications by visiting future "Foxconn Tech Talk" events.

Information regarding upcoming events will be released via Foxconn social media platforms as they are planned. For information about employment opportunities, please visit foxconnjob.us
